Beading needle

CrissCross Cubes

CrissCross Cubes
THIS IS THE NEW HOLE GENERATION! A new stunning idea of Patty McCourt, 4mm Cube with crisscross holes!

O BEAD ®

O BEAD ®
Another great idea from Sabine Lippert, a flattened donut shape bead, a mini ring of approx 1x3,8 mm size with approx 1.3 mm hole. Packed by 50 grams, each pack has approx 1,700 pcs.

CrissCross Spiral necklace

Thread the needle but don't cut the thread. Pick up criss cross bead, o-bead, pinch bead and o-bead. Repeat this until you use all your beads. The last bead must be criss cross bead. Fix the beginning of the thread with bead stopper leaving approx. 15 cm of the thread (pic 1). Leave approx. 1m on the other end of the thread and cut it, you'll need some more during the process.

Thread the needle but don't cut the thread (as on the previous strand). Go through the second hole of the first criss cross bead. Pick up Swarovski bicone and go through the second hole of every fourth criss cross bead until the end of your work (pic 2). The last bead should be bicone. Fix the beginning of the thread with bead stopper leaving approx. 15 cm of the thread. Tighten the strung beads so there are no gaps between them, but not firmly. Cut the thread, leave 15 cm and fix this end with stop bead.

Thread the needle but don't cut the thread (as on the previous strand). Pick up bicone and go through the second hole of the second criss cross bead. Pick up bicone and go through the second hole of every fourth criss cross bead until the end of your work (pic 3). Make sure that criss cross beads are facing the right way and so you create the look-a-like DNA shape spiral. The last bead should be bicone. Fix the beginning of the thread with bead stopper leaving approx. 15 cm of the thread. Tighten the strung beads so there are no gaps between them, but not firmly. Cut the thread, leave 15 cm and fix this end with stop bead.

Thread the needle but don't cut the thread (as on the previous strand). Pick up bicone and go through the second hole of the third criss cross bead. Pick up bicone and go through the second hole of every fourth criss cross bead until the end of your work (pic 3). Tighten up and fix this strand on both sides as on the previous strand.

Remove all beadstoppers (or stop beads) from one side of the necklace. Using clam shell, crimp beads and jump ring finish this side. Split the ribbon into two halves. Attach one end of the ribbon to the jump ring. Do the same on the other side of the necklace.
